Vulcanising tape

Product group	505
Max temperature (°C)	90
Min temperature (°C)	-40

Hydroscand vulcanising tape is an insulating and sealing tape that can withstand temperatures from -40° C - + 90° C. The tape is resistant to long-term exposure of water very well and is therefore ideal for temporary leaks on pipes and hoses. The tape has very good electrical qualites and works well for most cable insulation and rubber and plastic materials. The tape is easy to use and leaves no residue on removal.
