

ArcticOrange - Central lubrication grease

Product group	509
Max temperature (°C)	142
Min temperature (°C)	-58

The grease is developed to maintain the physical / chemical structure and lubricating properties down to - 58°C and with the soft structure, unchanged pumpability in central lubrication system is below -30 ° C. The thickening agent is a calcium complex which implies very good load bearing capacity, excellent water resistance, which is important in climates where melting ice and snow can cause breakdowns and malfunctions.
